ABOUT KAMO MOLD

HOW WE ARE

We are a medium-sized family-owned company founded in 1989 by Zhoran Babakhani. As a partner of engineers of almost all industrial sectors “Kamo Mold” manufactures precision parts, assemblies, molds and injection molded parts. “Kamo Mold” is a byword for highest quality in the shortest time. Today, our customers can rely on our 30 years of experience in customer-centered project organization. Our experienced toolmakers do everything to implement our customers’ requirements down to the very last detail.

Services

CNC Machining

Experience your CNC milling services with the precision of a mold maker!

With the same precision that we have been molding for 30 years, we perform your CNC milling services to the highest standards.

You do not have any worries in the process of CNC milling services, by providing the best equipment and personnel, we will make your dream come true.

Our operators are specialized personnel who produce your parts accurately on modern CNC machines manufactured by Mitsubishi electric CNC according to your needs.

It does not matter if your piece is aluminum or steel, it is a big piece or very small. We provide your CNC milling services up to the dimensions of 1060 * 600 * 600.

Blow Molds

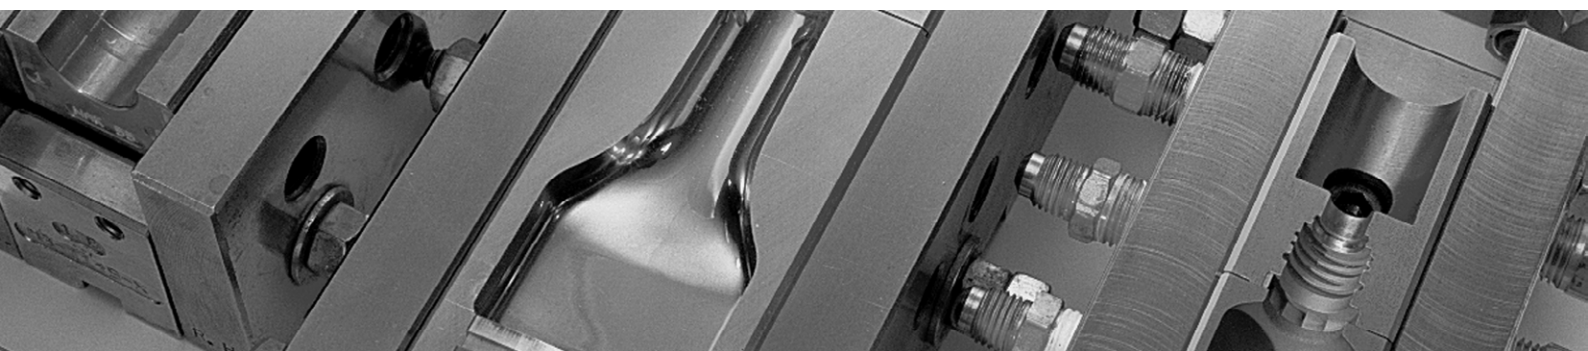

The Speed of your Product Line is Important, our Blow Molds are Fast and More Durable!

Speed and durability are usually among the points that always play a key role in designing Blow molds. Kamo mold with experience in producing blow molds for the country's oil giants, we guarantee the success of your project.

We have been making blow molds for various uses for many years, so you can count on our experience:

Advantages of kamo blow mold

- Increase profits by reducing breakdown costs:
- Increase production speed with more cooling power of the mold:
- Longer life by choosing the right mold material:

Plastic Injection Mold

Plastic Injection Molds with Higher Productivity

For most manufacturing companies, making plastic injection molds is one of the most risky stages of production, we are with you from the beginning, from designing and selecting the right materials to delivering the prototype, you can count on our 30 years of experience.

At kamo, we like to expand our boundaries every day. Your plastic mold should have a high Efficiency! Advantages of kamo plastic injection mold

- Lower weight of plastic injection molds:
- Higher cooling capacity:
- Higher injection speed of plastic injection molds

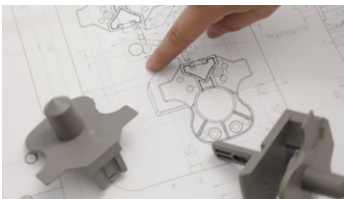

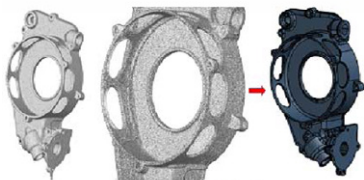

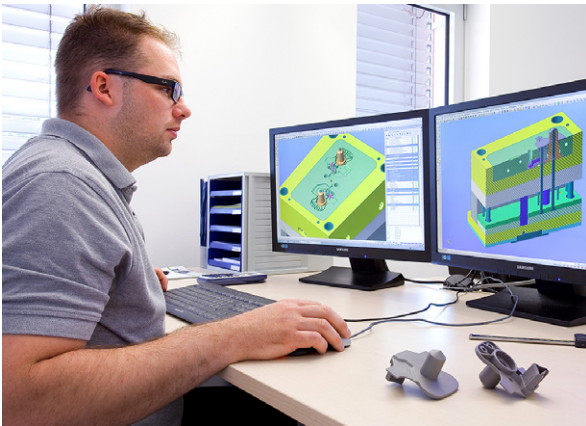

Design of Industrial Molds

Years of Experience and CAD Service for Higher Efficiency

We are with you all the time, from the very beginning of industrial mold design, which includes research to select the best injection materials to technical advice and mold design. We will accompany you in the production all the way to the final piece.

In the field of industrial mold design, our engineers use Solid Works and Catia software to design the final mold or, if you have a sample, reverse engineer it for you. And if you want, you can touch the final sample using a variety of simulation devices such as 3D printers.

Plastic Injection Molding

Know-How - Quality - Reliability

With the fluctuations in the price of plastic materials during these years, the production of plastic parts can no longer be done without planning, we are here so that your plastic parts can compete in the market, we have 30 years of experience in the production of plastic parts, We are ready to be with you in the whole process of producing plastic parts. You have to stay competitive.

Die Casting Molds

Low Depreciation Molds, Non-stop Production

During these 30 years, we have always increased our knowledge in the production of die-cast molds, our customers have been mainly active in the field of automotive industry, the focus of Kamo molds has been mainly on small and medium parts.

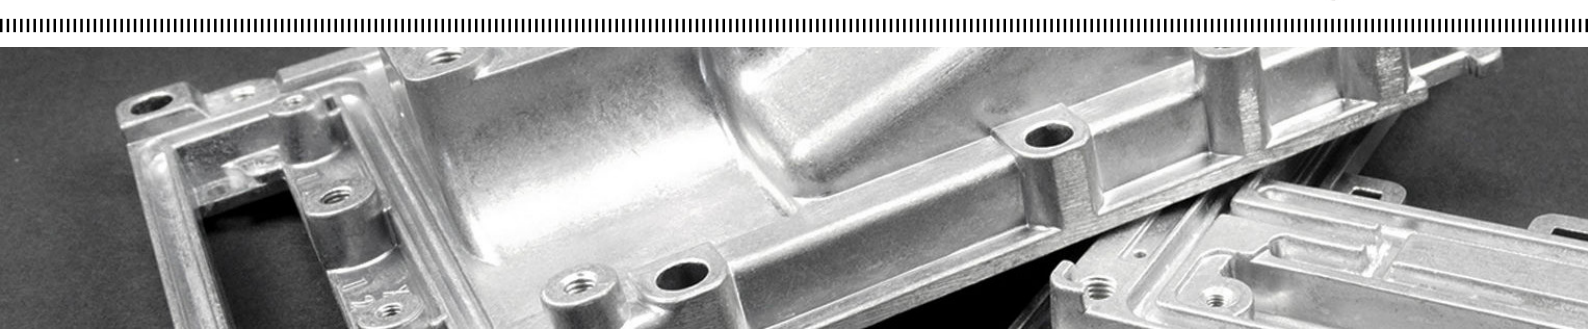

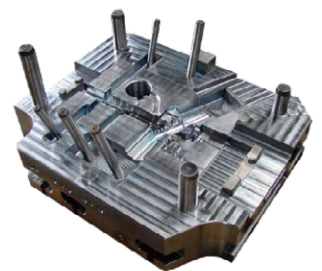

During these 30 years, we have always tried to increase our knowledge of the challenges in building die cast parts with various solutions.

Our services go beyond making die-cast molds if you need them, and go as far as producing and selecting die-cast injection molding machines.

We are here to minimize the waste of your die-cast molds.

Advantages of kamo die cast mold

- Increase mold injection speed:
- Reduction of waste during production:
- Reduction of breakdown during production

Areas Served: Iran, Georgia, Afghanistan, Tajikistan, Uzbekistan, Iraq
